Popular Palettes

Saves in Favourites list (requires login)

Share/Export

- Save visual version of palette
(Save in some image format
as shown above but with
hex values and colour names
below boxes)
- Save in a text format with
that colour's role -
(e.g. main1, main2,
highlight1, etc...),
colour name, and
the colour as rgb,
hex, or hsl.

Different types of
palettes offered.
Some with many
details and structure
(Main colours,
secondary colours,
highlights/shades
off main colours)

File Structure

```
public_html/  
  css/  
  img/  
  js/  
  index.php  
resources/  
  lib/  
  templates/  
  config.php
```

The public_html directory will contain the publicly accessible web pages (HTML/PHP). css/ contains CSS stylesheets. img/ contains images. js/ contains JavaScript files. index.php will be the root page of the web site. lib/ contains any personal or third party libraries (if necessary). templates/ will contain any PHP files that will be used on multiple pages (header.php, footer.php, sidebar.php, etc.). config.php will contain database credentials, path aliases and other side wide settings.
